

# GSX Analyzer

Lotus Software ■ Traveler ■ Quickr ■ BES ■ Microsoft Exchange ■ Microsoft SharePoint

**GSX Monitor** is a solution that enables IT managers and administrators to proactively manage an organization's entire collaboration environment. **GSX Analyzer** extends the powerful functionality of **GSX Monitor** by enabling you to create extensive automated reports based on the results, statistics and user perspective collected by **GSX Monitor**.

**GSX Analyzer** uses the data captured by **GSX Monitor** to generate a range of trend reports and performance metrics that help you to understand the usage and performance of your servers. By highlighting changes and patterns, the reports enable you to pinpoint potential problems and prioritize them for attention before your service is impacted. The extensive reporting features allow you to identify trends, manage capacity requirements, forecast, and understand the overall health of your collaborative environment. You can generate consolidated, consistent reports for all the components in your infrastructure, regardless of technology.

**GSX Analyzer** includes a wide range of report templates. You can use these templates as they are or you can customize them to align with your organization's specific requirements; they are perfect for SLA and KPI reporting. GSX is continually responding to customer feedback, and version 10.1 of **GSX Analyzer** includes a range of new report templates that leverage the knowledge and experience of our global customer base. **GSX Analyzer's** management reports can be run on demand or scheduled and delivered automatically to one or more recipients.

GSX Analyzer: Dashboard Metrics and Reports

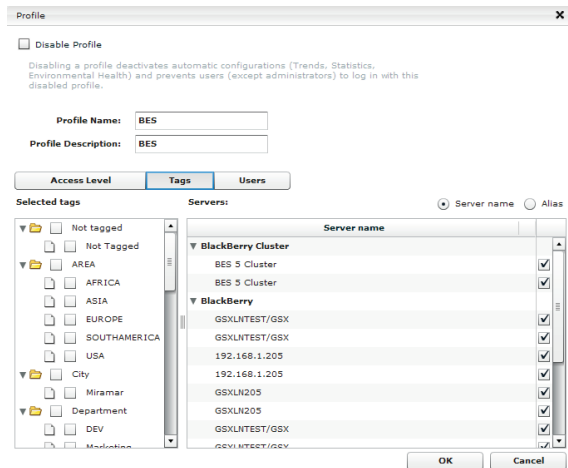

## ANALYZER PROFILES

**GSX Analyzer** profiles enable administrators to filter, organize, manage, and distribute information. Profiles ensure that the right information is shared with the right people in a secure and structured manner.

Profiles can be used to filter information by company, by customer, by location, by server, or by any other user-defined "tag".

### ★ NEW IN VERSION 10.1

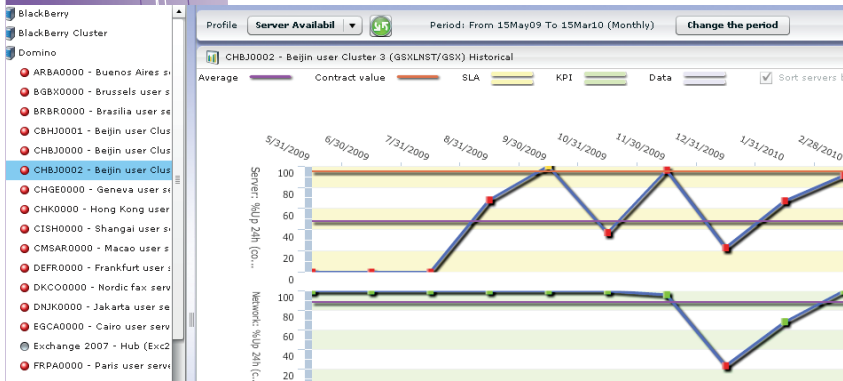

You can share trend report templates across all your profiles. You can also disable obsolete profiles, while still retaining all the reports associated with that profile.

Create an Analyzer Profile

## ENVIRONMENTAL HEALTH

**GSX Analyzer's** Environmental Health feature provides an overview of the health of your entire collaborative environment. Use Environmental Health to compare the performance of SLAs and KPIs across all the servers in your environment. With Environmental Health reports you can instantly and easily compare key metrics across all of your servers. This means that you can rapidly identify issues with servers and prioritize them for attention.

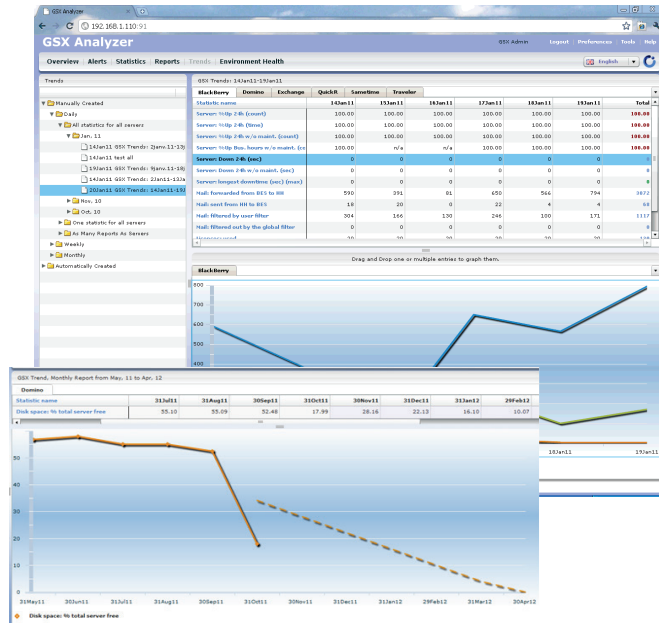

Environmental Health

## TRENDS

**GSX Analyzer** trend reports enable administrators to track the performance of selected statistics over a period of time. Trend reports can be created on demand or scheduled and delivered automatically to one or more recipients. Trend reports highlight changes and patterns, helping administrators and managers to understand the past performance of the servers and services.

### ★ NEW IN VERSION 10.1

Now, in addition to understanding past performance, you can also use trend reports to predict future performance. **GSX Analyzer's** powerful forecasting feature eliminates the need for manual operations and enables you to plan future capacity requirements, quickly identify potential future problems, and take action proactively.
